

EFFECTIVE PROJECT MANAGEMENT WITH GENERATIVE AI

COURSE CODE: TGS-2025052571

The WSQ Effective Project Management with Generative AI course trains professionals to use AI for smarter project planning, execution, and monitoring. It covers AI-powered tools for project initiation, stakeholder engagement, risk assessment, resource optimization, and decision-making in cost, schedule, and quality management.

Through hands-on exercises, participants will apply Generative AI to streamline communication, automate workflows, enhance risk mitigation, and monitor performance with real-time analytics. By the end, learners will be equipped to implement AI-driven solutions that improve efficiency, accuracy, and overall project outcomes.

Mode of Training

Classroom

3 Days (9:00 AM - 6:00 PM)

Topic 1: Project Initiation and Planning with GenAI

- Define project scope, charter, stakeholders, and overall management plan.
- Plan scope, schedule, cost, quality, resources, and communication.
- Develop strategies for risk, procurement, and stakeholder engagement.

Topic 2: Project Execution and Delivery with GenAI

- Direct and manage project work while applying knowledge management.
- Engage stakeholders, ensure quality, and acquire/manage resources.
- Oversee team performance and maintain effective communications.

Topic 3: Manage Project Risks with GenAI

- Implement risk responses and manage procurements and change control.
- Monitor and control scope, schedule, cost, quality, resources, and communications.
- Validate deliverables, engage stakeholders, and close project phases.
